PROFESSIONAL SUMMARY

AI engineer with strong foundations in Python, C/C++, and machine learning, with hands-on experience building computer vision pipelines from dataset preprocessing through model training and deployment. Currently completing the 42 Abu Dhabi software engineering program — a rigorous, project-based curriculum built entirely on self-directed learning. Passionate about applied CV, model optimization, and efficient inference systems, with a long-term focus on AI research.

TECHNICAL SKILLS

Languages	Python • C • C++ • TypeScript • SQL
ML & CV	PyTorch • Computer Vision • Object Detection • Model Training & Evaluation • Feature Engineering
Tools & Infra	FastAPI • Docker • Git • Linux • PostgreSQL • Ollama
Concepts	ML Fundamentals • Data Structures & Algorithms • Systems Programming • Memory Management • Networking

PROJECTS

DataMind RecognizeAI Hackathon — Face Recognition System

3rd Place

Python • PyTorch • Computer Vision • Team Competition

- Built a complete object recognition pipeline: dataset collection, preprocessing, model training, evaluation, and deployment — under live competition conditions
- Applied classification and recognition techniques across a multi-class face dataset; evaluated model performance using standard CV metrics

mynet — Low-Level ML Inference Engine

Ongoing

C • Personal Project • Ongoing

- Built from scratch in C, inspired by llama.cpp/ggml; implements matrix multiplication, memory management, and forward-pass primitives
- Focused on optimizing AI model inference for on-premise and edge hardware deployment — directly relevant to geospatial and satellite AI workloads

MOEI Decode Hackathon — AI Housing Agent

2026

Nest.js • React • Qwen3 14B • Ollama

- Built an AI-powered agent for a UAE Ministry of Energy & Infrastructure challenge using a locally hosted LLM
- Implemented LLM tool-use pipeline via OpenAI-compatible API — experience applicable to multi-modal and foundation model workflows

REIFGO

Personal Project

React Native • Nest.js • PostgreSQL • Prisma • Anthropic API

- Full-stack mobile app with AI Advisor feature integrated via Claude API — end-to-end AI model integration into a production system
- JWT auth, OTP, rate limiting, and relational database design (PostgreSQL + Prisma ORM)

Cub3D

42 Abu Dhabi

C • miniLibX • 42 Abu Dhabi

- Real-time 3D raycasting engine built from scratch: ray casting, texture mapping, and perspective projection — demonstrates spatial reasoning and image rendering at a low level

ft_irc & Core 42 Projects

42 Abu Dhabi

C++ • C • 42 Abu Dhabi

- ft_irc: multi-client IRC server with RFC 1459 protocol parsing; libft, push_swap, ft_printf, and full C++ OOP/template modules

WORK EXPERIENCE

Full-Stack Developer

April 2026 – Present

IN2G Group • Abu Dhabi, UAE • Startup

- Building production-grade corporate website with Next.js 14, TypeScript, and CSS Modules
- Sole frontend developer; collaborating directly with stakeholders on architecture, design, and GSAP animations

EDUCATION

42 Abu Dhabi — Software Engineering Program

2024 – Present

RNCP Level 6 (Bachelor's-equivalent, MENA region recognized) • Expected 2026

- Peer-to-peer, project-based curriculum: C/C++, algorithms, systems design, networking, DevOps, AI fundamentals
- No lectures or instructors — entirely self-directed learning validated through peer evaluation

ACHIEVEMENTS & LANGUAGES

- 3rd Place — DataMind RecognizeAI Hackathon (Face Recognition AI System) **English** Fluent
- Participant — MOEI Decode Hackathon 2026, UAE Ministry of Energy & Infrastructure **Arabic** Fluent
Russian Conversational
